

BEFORE THE PUBLIC SERVICE COMMISSION OF SOUTH CAROLINA

DOCKET NO. 2018-319-E

IN THE MATTER OF:

)	
Application of Duke Energy Carolinas, LLC)	REBUTTAL TESTIMONY OF
For Adjustments in Electric Rate Schedules)	DR. JULIUS A. WRIGHT
And Tariffs and Request for an Accounting)	FOR DUKE ENERGY
Order)	CAROLINAS, LLC

I. INTRODUCTION AND PURPOSE

1 **Q. PLEASE STATE YOUR NAME, OCCUPATION, TITLE AND**
2 **BUSINESS ADDRESS.**

3 A. Julius A. Wright, Managing Partner, J. A. Wright & Associates, LLC, 18
4 Edgewater Drive, Cartersville, Georgia, 30121. I am a consultant to regulated
5 utilities and regulatory agencies and other public bodies on issues related to
6 economics, economic modeling, regulatory policy, industry restructuring,
7 demand-side investments, and resource planning.

8 **Q. ON WHOSE BEHALF ARE YOU SUBMITTING THIS TESTIMONY?**

9 A. I am submitting this rebuttal testimony on behalf of Duke Energy Carolinas,
10 LLC (“DE Carolinas,” or the “Company”).

11 **Q. ARE YOU THE SAME JULIUS A. WRIGHT WHO FILED DIRECT**
12 **TESTIMONY IN THIS CASE?**

13 A. Yes.

14 **Q. PLEASE DISCUSS THE PURPOSE OF YOUR REBUTTAL**
15 **TESTIMONY.**

16 A. The purpose of my rebuttal testimony is to address several issues discussed in
17 the direct testimony of intervenors related to the recovery of costs associated
18 with coal combustion residuals (“CCR”), also referred to as coal ash,
19 remediation expenses.

1 **Q. PLEASE SUMMARIZE YOUR REBUTTAL TESTIMONY.**

2 A. First, my rebuttal testimony recommends that the Commission reject the cost
3 recovery disallowances related to coal combustion residuals (“CCR”) proposed
4 by Office of Regulatory Staff (“ORS”) witness Dan Wittliff.

5 Second, I respond to ORS witness Seaman-Huynh and his
6 recommendation that the Commission disallow recovery of what he terms
7 additional costs related to North Carolina laws and regulations. In my rebuttal,
8 I discuss why his proposed segregation and disallowance of what he terms
9 North Carolina allocated costs is incorrect and contrary to traditional regulatory
10 policy and would ultimately result in increased costs for the Company’s South
11 Carolina customers.

12 Third, I respond to ORS witness Gaby Smith’s recommended
13 disallowance for litigation expenditures that she believes are related to the
14 Company’s violation of environmental laws.

15 Fourth, I will respond to ORS witness Zachary Payne’s recommended
16 accounting treatment of the Company’s deferred costs, and I will show why his
17 recommendation is contrary to long-standing recovery principles and policy.

18 Fifth, I respond to a several issues related to coal ash costs raised by
19 South Carolina Energy Users Committee (“SCEUC”) witness Kevin
20 O’Donnell. I will respond to his claim that the Company’s coal ash related
21 costs are much higher than other electric utilities. I also discuss why his
22 recommended disallowance of 75% of the Company’s proposed coal ash costs
23 is inconsistent with traditional regulatory cost recovery principles.

1 Finally, I will respond to Sierra Club witness Ezra Hausman's
2 contention that the Company's recovery of CCR expenses be conditioned on
3 the Company's completion of a retirement analysis. My testimony will discuss
4 why this proposal violates longstanding rate-making principles.

5 **II. RESPONSE TO ORS WITNESS WITTLIFF**

6 **Q. WHAT ARE MR. WITTLIFF'S RECOMMENDATIONS RELATED TO**
7 **THE COMPANY'S CCR MANAGEMENT THAT YOU ARE**
8 **RESPONDING TO IN THIS REBUTTAL TESTIMONY?**

9 A. I am responding to several of Mr. Wittliff's arguments. First, I respond to his
10 (and ORS witness Seaman-Huynh's) overarching contention that South
11 Carolina ratepayers should not be required to pay an allocated portion of costs
12 incurred by the Company to comply with North Carolina environmental
13 regulations. Next, I address the fact that Mr. Wittliff's argument for cost
14 disallowance fails to meet the appropriate regulatory standard for excluding
15 costs from recovery. Finally, I address Mr. Wittliff's specific recommendations
16 related to the CCR management underway at the Riverbend, Dan River, and
17 Buck facilities in North Carolina, where he identifies a percentage of CCR
18 management costs that he claims were due to North Carolina law and should,
19 therefore, not be allocated to South Carolina customers.

1 **A. Recovery of Environmental Compliance Costs For CCR Management**

2 **Q. DO YOU AGREE WITH MR. WITTLIFF'S CONCLUSION THAT THE**
3 **COSTS HE RECOMMENDS BE EXCLUDED FROM RECOVERY IN**
4 **THIS CASE ARE RELATED ONLY TO CAMA AND ARE NOT COSTS**
5 **REQUIRED BY THE FEDERAL CCR RULE?**

6 **A.** No. I do not agree that the only costs he wants to exclude are related to CAMA.
7 I understand that the Company disagrees with Mr. Wittliff's apparent
8 conclusion that there are substantial differences between costs that may be
9 required by CAMA as compared to costs that are required by the Federal CCR
10 Rule. This specific issue is addressed in the rebuttal testimony of Mr. Kerin.

11 **Q. EVEN ASSUMING THERE ARE DIFFERENCES BETWEEN CAMA**
12 **AND CCR RULE COSTS, DOES THAT JUSTIFY MR. WITTLIFF'S**
13 **RECOMMENDATION TO DISALLOW CAMA-RELATED COSTS?**

14 **A.** No. In my rebuttal testimony, I address the general concept that even if there
15 are differences in the CAMA-related and Federal CCR Rule-related costs, these
16 differences do not disqualify such CAMA-related costs from recovery from
17 South Carolina customers.

18 **Q. IS MR. WITTLIFF'S PROPOSAL FOR DISALLOWANCE OF WHAT**
19 **HE TERMS "CAMA-RELATED COSTS" CONSISTENT WITH**
20 **ESTABLISHED REGULATORY PRACTICES FOR MULTI-STATE**
21 **UTILITIES?**

22 **A.** No. Mr. Wittliff states (page 29, lines 13-15) that "it is the position of ORS that
23 costs incurred as a result of jurisdictional laws should not lead to increased costs

1 to ratepayers outside of that jurisdiction.” ORS witness Seaman-Huynh (page
2 6, lines 11-15) makes this same argument. This position is extreme and
3 incorrect, and neither witness offers any policy justification for wholesale
4 disregarding costs to comply with another state’s laws. It is my experience that
5 costs are allocated and recovered from customers based on which customers are
6 served or benefitted by the actions that led to those costs. In this case, it is
7 undisputed that the coal ash located at all of the Company’s coal sites was
8 produced as a result of providing electric energy to the Company’s customers
9 in both South Carolina and North Carolina. Therefore, the costs related to the
10 CCR unit closure should likewise be borne by customers in both states.
11 Furthermore, even though some costs to serve electric customers may be
12 incurred due to a jurisdiction-specific law, such as differences in property taxes,
13 this does not mean that the costs of such a law are not recoverable from all
14 customers who benefit from the electric service activity associated with the law.
15 This is how South Carolina and North Carolina have historically treated such
16 costs and this includes costs that may be the result of a particular state’s laws
17 or regulations.

18 Finally, the Company does not have the option to ignore South Carolina
19 or North Carolina state law. If the Company is to continue to supply electric
20 service it must comply with the environmental laws of both South Carolina and
21 North Carolina. The Company cannot simply pick and choose which
22 environmental laws with which to comply. It would, therefore, be unreasonable
23 to disallow costs the Company has incurred to follow the law.

1 **Q. CAN YOU PROVIDE ANY EXAMPLES OF STATE SPECIFIC COSTS**
2 **THAT ARE SHARED BY NORTH CAROLINA AND SOUTH**
3 **CAROLINA CUSTOMERS?**

4 A. Yes. Some state specific costs that are often shared between the states include
5 property taxes, on generation and transmission assets, differences in everyday
6 operating costs like employee expenses, contractor expenses, fuel costs, and
7 even costs like fuel transportation, which can differ depending on the location
8 of a generating station (for example, rail service from coal mines to North
9 Carolina can be different, and usually cheaper because of distance, than rail
10 service to South Carolina). In addition, it is my understanding that, in this case,
11 the Company is proposing to return to South Carolina customers \$87 million of
12 excess deferred income taxes resulting from a decrease in the North Carolina
13 state income tax rate. This decrease in the income tax rate is the result of North
14 Carolina legislation. If it is the ORS's position that South Carolina customers
15 should not pay for any costs due to North Carolina legislation, then they should
16 also propose that South Carolina customers not receive any benefits due solely
17 to North Carolina legislation, and remove the \$87 million refund of North
18 Carolina state income taxes from the case.

19 **Q. HAVE NORTH CAROLINA AND SOUTH CAROLINA SHARED THE**
20 **COMPANY'S ENVIRONMENTAL COMPLIANCE COSTS PRIOR TO**
21 **THIS CASE?**

22 A. Yes. In fact, it is my experience that most, if not all, of the environmental costs
23 the Company has expended, absent some unusual circumstance, have been

1 shared between the states. For example, coal ash beneficial reuse revenues
2 have, to date, been allocated and shared between both states. Also, as I
3 mentioned in my direct testimony, in this Commission's Docket No. 2011-271-
4 E, costs associated with a Cliffside facility scrubber, located in North Carolina,
5 were allocated to and recovered from South Carolina customers. Similarly, in
6 Docket No. 2009-226-E, costs associated with scrubbers at the Allen Steam
7 Station, also located in North Carolina, were likewise recovered from South
8 Carolina customers.

9 **Q. IS THIS TYPICAL IN OTHER STATES AS WELL?**

10 A. Yes. This type of cost sharing is common where a utility's operations span
11 multiple states and the utility property used to provide one particular state's
12 electric service may be located in another state. Some examples of other states
13 sharing environmental costs include:

14 *Application of Southwestern Electric Power Company for Authority to*
15 *Change Rates, SOAH Docket No. 473-17-64, PUC Docket No. 46449*
16 *(Sept. 21, 2017); Order on Rehearing (Mar. 19, 2018) (Allowed the*
17 *environmental costs associated with retro-fitting a facility located in*
18 *Louisiana in which a Texas utility owned an interest to be included in*
19 *the Texas utility's rate base).*

20 *In re: Petition for approval of 2016 depreciation and dismantlement studies,*
21 *approval of proposed depreciation rates and annual dismantlement*
22 *accruals and Plant Smith Units 1 and 2 regulatory asset amortization,*
23 *by Gulf Power Company, Order No. PSC-17-0178-S-EI, FL PSC*

1 *Docket No. 160170-EI (May 16, 2017)* (Base rate case where Florida
2 PSC allowed Gulf Power cost recovery of environmental costs
3 associated with a plant in Georgia in which Gulf Power had an
4 ownership interest through Gulf Power's environmental cost recovery
5 clause).

6 *In Re Environmental Cost Recovery Clause, Docket No. 090007-EI, 2009 WL*
7 *2028575 (Mar. 31, 2009)* (Florida Public Service Commission
8 approves Gulf Power's inclusion of environmental costs (including
9 costs related to closure of an ash pond) relating to a Mississippi coal-
10 fired generating unit in which Gulf Power owned an interest in its
11 environmental compliance program, which program costs Gulf Power
12 recovers through its environmental cost recovery clause).

13 **Q. HOW IS SOUTH CAROLINA ADDRESSING THE CCR UNITS THAT**
14 **ARE LOCATED WITHIN THE STATE?**

15 A. South Carolina stakeholders have demonstrated a strong preference for
16 excavation of coal ash ponds through settlements or negotiations with its
17 electric suppliers, which predate the adoption of the Federal CCR Rule and
18 CAMA. This excavation preference is more prescriptive than the CAMA
19 policies and reflects the most expensive type of closure option. For example,
20 with respect to the Company's W.S. Lee facility in South Carolina, on
21 September 23, 2014, the Company entered into a Consent Agreement with the
22 South Carolina Department of Health and Environmental Control
23 ("SCDHEC"), and on April 23, 2015, entered into a related Settlement

1 Agreement with several environmental groups, both of which dealt with coal
2 ash at the W.S. Lee facility. These agreements called for the excavation of all
3 of this site's CCR units, even those inactive units which were not covered under
4 the CCR Rule.

5 It is important to note that the costs associated with these South Carolina
6 agreements are appropriately allocated and recovered from North Carolina
7 customers as approved by the North Carolina Utilities Commission's June 22,
8 2018 Order in the Company's recent North Carolina general rate case (Docket
9 No. E-7, Sub 1146, page 266, 332).

10 **Q. WHAT DO YOU BELIEVE WOULD BE THE ULTIMATE RESULTS IF**
11 **THIS COMMISSION WERE TO ADOPT MR. WITTLIFF'S**
12 **RECOMMENDATIONS THAT ANY COSTS ASSOCIATED WITH**
13 **NORTH CAROLINA'S CAMA LAW SHOULD BE EXCLUDED FROM**
14 **RECOVERY IN SOUTH CAROLINA?**

15 A. I discuss this in more detail in my response to ORS witness Seaman-Huynh.
16 However, in brief, in the near term, the Company's financial condition would
17 be negatively impacted, likely resulting in an increase in the Company's cost of
18 capital. Over time, this would lead to additional costs for all of the Company's
19 customers. In other words, over time both South Carolina's and North
20 Carolina's customers' electric service costs would increase due to South
21 Carolina customers failing to pay their fair share of these environmental costs.

22 In addition, the failure of South Carolina customers to pay their
23 allocated share of these costs would certainly be an unwelcome result to North

1 Carolina citizens and regulators, as it would mean that North Carolina
2 customers are currently paying their share of costs related to South Carolina's
3 coal ash standards, which is a more costly and extensive remediation than what
4 is required by either CAMA or the Federal CCR Rule. Contemplating this
5 result leads to the legitimate question of why it is appropriate for South Carolina
6 and its citizens to require and have costs recovered for excavation of its coal
7 ash ponds, but it is not appropriate for similar and even less costly remediation
8 for North Carolina coal ash ponds? In the end, accepting Mr. Wittliff's
9 recommendation would likely result in some state regulatory jurisdictional
10 issues that could even cause both states and the Company to rethink whether
11 sharing generation assets still makes sense.

12 **Q. DOES MR. WITTLIFF CONTEND THAT CAMA REQUIREMENTS**
13 **ARE UNREASONABLE OR OUT OF LINE WITH WHAT OTHER**
14 **STATES ARE NOW REQUIRING REGARDING ASH BASIN**
15 **CLOSURES?**

16 A. No, he does not, nor could he credibly make such an arguments. For example,
17 Virginia has recently adopted state-specific CCR unit closure legislation,
18 similar to CAMA in requiring site specific closure standards and other
19 requirements. Additionally, other states have adopted basin closure rules and
20 regulations through their regulatory agencies that are more prescriptive than the
21 Federal CCR Rule and/or reached settlements with their electric utilities
22 regarding coal ash remediation that requires steps beyond those required by the
23 Federal CCR Rule. These new environmental regulations and legal settlements

1 of several disputes have resulted in South Carolina's surrounding states
2 adopting coal ash remediation policies that achieve similar closure standards as
3 required by CAMA. This is illustrated in the following list:

4 **Georgia** - Adopted the Federal CCR Rule, but it has additional
5 guidelines adopted by the Georgia Department of Natural Resources in
6 Oct. 2016 that are more restrictive than the Federal CCR Rule at the
7 time in that these rules also related to inactive facilities not covered by
8 the Federal CCR Rule. Georgia also has pending legislation, HB 94,
9 which does address coal ash landfill restrictions. In addition, Georgia
10 Power has agreed to close all 29 of its coal ash ponds. While Georgia
11 Power initially agreed to cap 12 ponds in place and excavate 17, recently
12 that utility has agreed to excavate two more large sites;

13 **Virginia** - Adopted the Federal CCR Rule, and then the state passed
14 legislation that required Dominion Energy to excavate all of its coal ash
15 sites in the Chesapeake Bay Watershed and also required beneficiation
16 at two sites. The legislation also had a 15 year time limit on the
17 excavation, and it allowed cost recovery (plus a return), employment
18 requirements, and reporting requirements;

19 **Tennessee** – The Department of Environment and Conservation
20 (“DEC”) has adopted the Federal CCR Rule, but the Department’s rule
21 indicated that it would oversee TVA’s coal ash closure and even if TVA
22 was in compliance with the Federal CCR Rule that the Department may

1 require additional actions. Recent court action is also requiring
2 extensive excavations of various TVA sites;

3 *Florida* - The state adopted the Federal CCR Rule, however most of this
4 state's coal ash is beneficiated. In addition, Tampa Electric Company
5 recently decided to excavate its coal ash site at Big Bend Power Station
6 and submitted its closure plan for the site on October 2018;

7 *Alabama* - According to the Alabama Public Service Commission, the
8 Alabama Department of Environmental Management has not yet
9 adopted the CCR Rule but is considering seeking EPA approval for a
10 state program that must be as stringent as the Federal CCR Rule. In
11 addition, Alabama Power currently is involved litigation that would
12 require excavation of its CCR units.

13 **Q. CAN YOU PLEASE COMPARE NORTH CAROLINA'S COAL ASH**
14 **REGULATIONS TO THOSE IN SOUTH CAROLINA?**

15 A. Through settlements with its electric utilities, South Carolina stakeholders have
16 displayed a strong preference for the excavation of unlined coal ash basins – a
17 result that is more prescriptive, more extensive, and more costly than what
18 would have been allowed under CAMA or the Federal CCR Rule for some sites.
19 Today, every unlined coal ash pond in South Carolina is being or will be
20 excavated. For example, in addition to the example of the Company's W.S.
21 Lee facility I discuss above, in 2013 Santee Cooper agreed to excavate its
22 Grainger site. In 2012, SCE&G settled a lawsuit by agreeing to excavate its
23 Wateree and Canadys sites.

1 **Q. DOES MR. WITTLIFF DISAGREE WITH SOUTH CAROLINA**
2 **STAKEHOLDERS' APPROACH TO CCR CLOSURE?**

3 A. No. Mr. Wittliff does not take issue with the Company's closure strategy for
4 W.S. Lee. I find that position interesting considering his statement that "North
5 Carolina law should not place an additional burden on the ratepayers of South
6 Carolina" (page 29, lines 19-22). Therefore, I assume Mr. Wittliff would agree
7 with the proposition that North Carolina could simply adopt South Carolina's
8 coal ash closure preferences and excavate all of the sites in North Carolina with
9 South Carolina paying its full share of the increased costs that would come with
10 such a policy.

11 **Q. IF NORTH CAROLINA SIMPLY FOLLOWED SOUTH CAROLINA'S**
12 **CURRENT COAL ASH REMEDIATION PREFERENCES, WHAT**
13 **WOULD BE THE RESULTING COMPLIANCE STANDARD AND**
14 **COSTS?**

15 A. As I indicated above, South Carolina's coal ash remediation policies require
16 excavating every unlined coal ash site. Where CAMA and the Federal CCR
17 Rule allow some North Carolina sites to be capped-in-place, which is generally
18 a less costly option than excavation, these sites, if located in South Carolina,
19 would likely be excavated. Therefore, if North Carolina adopted this policy the
20 costs would far exceed what is being requested in this filing.

B. The Appropriate Regulatory Standard For Disallowance of Costs

Q. IN YOUR OPINION, IS MR. WITTLIFF'S PROPOSAL FOR COST DISALLOWANCE AN APPROPRIATE BASIS FOR DISALLOWING MORE THAN HALF OF THE COMPANY'S COSTS FOR COMPLYING WITH CAMA AND THE FEDERAL CCR RULE?

A. No. The appropriate regulatory standard for denial of cost recovery is a finding that specifically identified costs were either not prudent,¹ the costs were unjust or unreasonable,² or the costs were for facilities or expenses that are not considered used and useful³ in the provision of electric service. As I will explain, Mr. Wittliff fails to present an argument that meets any of these three regulatory cost disallowance standards.

Simply relying on a claim that the Company is responding to a North Carolina law and, therefore, these costs only relate to North Carolina, as Mr.

¹ "Regulators, in turn, agree to allow the utility to recover any costs that are "prudently" incurred in order to earn a "fair" return on its investment.", Public Utility Commission Study, EPA Contract No. EP-W-07—064, March 31, 2011, page 5. "Although the burden of proof of the reasonableness of all costs incurred which enter into a rate increase request rests with the utility, the utility's expenses are presumed to be reasonable and incurred in good faith. *Hamm v. S.C. Pub. Serv. Comm'n*, 309 S.C. 282, 286, 422 S.E.2d 110, 112 (1992) (citations omitted). "This presumption does not shift the burden of persuasion but shifts the burden of production on to the Commission or other contesting party to demonstrate a tenable basis for raising the specter of imprudence." *Id. See also Utils. Servs. of South Carolina, Inc. v. South Carolina Office of Regulatory Staff*, 392 S.C. 96, 109-10, 708 S.E.2d 755, 762-63 (2011) (confirming that the same standard applied after the formation of the ORS).

² Such a regulatory policy fails to meet the most basic regulatory requirement that rates are based on "known and measurable" dollars. *See Hamm v. S.C. Pub. Serv. Comm'n*, 309 S.C. 282, 291, 422 S.E.2d 110, 115 (1992) ("adjustments for known and measurable changes in expenses...must be known and measurable within a degree of reasonable certainty") and see §58-27-810 states that "Every rate made, demanded or received by any electrical utility or by any two or more electrical utilities jointly shall be just and reasonable."

³ With respect to the "used and useful" standard, South Carolina, like other states, has defined used and useful utility property as "property which it [the utility] necessarily devotes to rendering the regulated services" and has allowed recovery for such property in rates. *Hamm v. S.C. Pub. Serv. Comm'n*, 309 S.C. 282, 286 n. 1, 422 S.E.2d 110, 112 n. 1 (1992) (quoting *Southern Bell Tel. & Tel. Co. v. Pub. Serv. Comm'n of S.C.*, 270 S.C. 590, at 600, 244 S.E.2d 278, at 283 (1978)).

1 Wittliff suggests, could be seen as arbitrary and capricious when this coal ash
2 and any related costs have clearly been incurred as a result of providing electric
3 service to customers in both South Carolina and North Carolina.

4 **Q. HAS MR. WITTLIFF PRESENTED ANY ARGUMENT OR FINDING**
5 **THAT THE COSTS HE SEEKS TO EXCLUDE FROM RECOVERY**
6 **ARE IMPRUDENT OR UNREASONABLE?**

7 A. No. Mr. Wittliff has not performed a prudence analysis of DE Carolina's costs.
8 The disallowances he recommends are entirely tied to whether costs are related
9 to CAMA.

10 **Q. HAS ANY REGULATORY JURISDICTION EVER EXAMINED AND**
11 **RULED ON THE QUESTION OF WHETHER THE COSTS MR.**
12 **WITTLIFF SEEKS TO DISALLOW IN THIS CASE WERE**
13 **PRUDENTLY INCURRED?**

14 A. Yes. The North Carolina Utilities Commission recently ruled on this same
15 issue. After filings and extensive testimony from this same witness and cross
16 examination, that body concluded "The expert witnesses sponsored in this case
17 failed to support allegations of discrete actions constituting imprudence."
18 (Order in Docket No. E-7, Sub 1146, June 22, 2018, page 262)

19 **Q. HAS MR. WITTLIFF PRESENTED ANY ARGUMENT OR FINDING**
20 **THAT THE COSTS HE SEEKS TO EXCLUDE FROM RECOVERY**
21 **ARE NOT USED AND USEFUL?**

22 A. No. The disallowances he recommends are entirely tied to whether costs are
23 related to CAMA. Furthermore, it is undisputed in this case that the coal plants

1 associated with these costs and the related coal disposal facilities have been
2 used and useful in providing low-cost, reliable power to South Carolina
3 customers for more than 70 years. Consequently, these types of costs and, if
4 any amount is deferred over time, a return, would be appropriately recoverable
5 in rates to ensure that the Company recovered the equivalent of the full amount
6 of those costs.

7 **C. Costs Related To Specific Plants**

8 **Q. ARE THE COSTS WHICH MR. WITTLIFF SEEKS TO DISALLOW**
9 **RECOVERY IN THIS CASE RELATED TO SPECIFIC SITES?**

10 A. Yes, he recommends disallowances for three sites: Dan River, Riverbend, and
11 Buck.

12 **Q. WHAT IS MR. WITTLIFF'S RECOMMENDATION WITH RESPECT**
13 **TO THE DAN RIVER PLANT?**

14 A. Mr. Wittliff indicates that the Federal CCR Rule would not have required
15 closure actions at Dan River to start until October 31, 2020, while closure under
16 CAMA is required to be completed by August 1, 2019. He essentially claims
17 CAMA's accelerated schedule generated the Dan River costs too early, and thus
18 he would exclude all Dan River costs except what he has calculated to be
19 engineering and planning costs (see Wittliff Direct T. at 36 – 38). The result is
20 that he would disallow recovery at this time of \$116.7 million in Dan River
21 CCR sites closure costs, for which he says the Company can seek recovery after
22 2020 (Wittliff Direct T. at 37:6-9).

- 1 **Q. IS MR. WITTLIFF’S ARGUMENT THAT THE COSTS ASSOCIATED**
2 **WITH THE DAN RIVER PLANT ARE UNRECOVERABLE AT THIS**
3 **TIME BECAUSE THEY ARE IN RESPONSE TO CAMA AND NOT**
4 **THE FEDERAL CCR RULE REASONABLE?**
- 5 A. No. This is not a reasonable argument from a regulatory cost recovery
6 perspective in my opinion. Mr. Wittliff did not present evidence that the
7 Company’s Dan River closure strategy was unreasonable or imprudent.
8 Assuming the Commission found the Dan River closure strategy to be prudent
9 and reasonable, and there is no evidence to the contrary, then the costs should
10 be recoverable at this time. The Company must comply with the laws of both
11 North Carolina and South Carolina. ORS asks this Commission to conclude
12 that DE Carolinas incurred costs too early at Dan River because it complied
13 with CAMA. This effectively places the South Carolina Public Service
14 Commission in the position of having to determine what is a reasonable coal
15 ash compliance regulation for the state of North Carolina. For this case, the
16 Commission would have to conclude that the CCR Rule is the only reasonable
17 way to manage coal ash, and anything more prescriptive is excessive by
18 definition. This ignores that the CCR Rule contemplates that states may
19 develop more stringent regulation and it ignores the actions that South Carolina
20 stakeholders have taken that are above and beyond the requirements of the CCR
21 Rule.

1 **Q. WHAT IS MR. WITTLIFF’S RECOMMENDATION WITH RESPECT**
2 **TO THE RIVERBEND PLANT?**

3 A. Mr. Wittliff indicates that the Company should do nothing with respect to coal
4 ash at Riverbend at this time and recommends a disallowance of \$316,680,665,
5 reflecting the entire amount spent at Riverbend to date. He argues that the
6 “entire amount should be disallowed for recovery from South Carolina
7 ratepayers absent any federal regulations directing the actions taken by DEC or
8 similar actions.”(Wittliff Direct T. at 31:6-8).

9 **Q. ARE MR. WITTLIFF’S ARGUMENTS THAT COAL ASH COSTS AT**
10 **RIVERBEND ARE NOT RECOVERABLE BECAUSE CCR SITE**
11 **CLOSURE AT RIVERBEND IS NOT YET REQUIRED UNDER THE**
12 **CCR RULES REASONABLE?**

13 A. No. As is the case with my previous discussion of the Dan River site, Mr.
14 Wittliff has presented no argument that DE Carolinas’ closure methodology is
15 unreasonable or imprudent; his only claim is that the costs are being incurred
16 too soon. However, it is difficult to imagine that the Company should or would
17 be allowed by regulators and courts to simply do nothing at Riverbend at this
18 time, particularly given the current activity in neighboring states and given
19 current coal ash remediation plans in South Carolina resulting in excavation of
20 all unlined sites, including inactive basins.

1 **Q. WHAT IS MR. WITTLIFF’S RECOMMENDATION WITH RESPECT**
2 **TO THE BUCK PLANT?**

3 A. Mr. Wittliff essentially makes the same argument – that the beneficiation costs
4 at Buck were only because of CAMA and unnecessary under the Federal CCR
5 Rule. Thus, he recommends disallowance of what he has identified as the
6 “CAMA-only beneficiation” costs of \$36,544,788 (Wittliff Direct T. at 35: 21-
7 23; 36: 1-3).

8 **Q. IS MR. WITTLIFF’S ARGUMENT FOR HIS PROPOSED BUCK**
9 **DISALLOWANCE REASONABLE?**

10 A. No. Just as with the Dan River and Riverbend costs, the Company must comply
11 with the laws of North Carolina just as it must comply with the W.S. Lee
12 settlements in South Carolina. A Commission finding that the Buck costs are
13 not recoverable because they were incurred to comply with CAMA would again
14 suggest that CAMA is illegitimate. Mr. Wittliff does not suggest that the
15 closure strategy is unreasonable or imprudent.

16 Moreover, I am informed by Company personnel that DE Progress’s
17 beneficiation projects at its Cape Fear and H. F. Lee sites will actually flow
18 back a large cost savings to South Carolina customers. Because these sites are
19 being beneficiated under CAMA, following Mr. Wittliff’s recommendation in
20 this case would mean these cost savings would go completely to North Carolina
21 customers and not be realized by the Company’s customers in South Carolina.

1 **III. RESPONSE TO ORS WITNESS SEAMAN-HUYNH**

2 **Q. WHAT IS MR. SEAMAN-HUYNH'S RECOMMENDATION**
3 **REGARDING WHAT HE TERMS NORTH CAROLINA**
4 **JURISDICTIONAL COSTS?**

5 A. Mr. Seaman-Huynh's direct testimony (p. 6, lines 9-15) indicates that the ORS
6 recommends the Commission disallow recovery of what he terms additional
7 costs related to North Carolina laws and regulations. He refers to Mr. Wittliff
8 for more discussion on this issue and the exact recommendations. The laws and
9 regulations to which he is referring is the North Carolina's CAMA.

10 **Q. AS A GENERAL REGULATORY PRINCIPLE, WHY DO YOU**
11 **DISAGREE WITH THIS RECOMMENDATION?**

12 A. While I have addressed this issue in my response to Mr. Wittliff, I will provide
13 a more expansive response here. The Company acknowledges, and I agree, that
14 there are times that direct allocation of costs between jurisdictions is
15 appropriate; but, direct allocation of costs between jurisdictions for many, if not
16 most, costs is the exception, and not the rule, when jurisdictions share joint
17 assets and thus enjoy the mutual benefits that come from sharing those assets.
18 However, aside from these limited exceptions, the coal ash that is related to
19 these so-called CAMA costs was produced in providing electric service to
20 customers in both South Carolina and North Carolina. There is no dispute that
21 South Carolinians benefitted from the low electric rates and reliable service this
22 Company has provided for decades, in large part due to its coal-fired electric
23 generation. Therefore, just as those customers in South Carolina have

1 benefitted from this coal-fired electric service, they should likewise pay for the
2 costs associated with that service, including these new environmental
3 compliance costs.

4 **Q. CAN YOU CITE SOME SPECIFIC REASONS WHY MR. SEAMAN-**
5 **HUYNH’S PROPOSED JURISDICTIONAL COST ALLOCATION**
6 **RECOMMENDATION IS NOT IN THE CUSTOMERS’ BEST**
7 **INTEREST?**

8 A. Yes. First, while Mr. Seaman-Huynh may think his proposal is saving South
9 Carolina customers money; it is not, as further discussed in Mr. Kerin’s rebuttal.
10 Further, his proposal, if accepted, could call into question the equities of sharing
11 assets and economies of scale across a multi-state structure. In other words, the
12 “slippery slope” and the unintended consequences that come with ORS’s ill-
13 conceived proposal far outweigh any perceived benefit that ORS may believe
14 customers will see due to their suggested disallowances.

15 Second, if the Commission followed this recommendation, it would
16 cause investors to reevaluate their views on this Commission’s regulatory
17 policies. As numerous return on equity experts have testified, the investment
18 community does evaluate how regulatory commissions respond to utility filings
19 and these evaluations are reflected in a utility’s perceived riskiness and, in turn,
20 in its cost of capital. I believe that if this Commission were to accept Mr.
21 Seaman-Huynh’s recommendation, it would negatively impact investors’
22 perceptions of this Commission, which would likely increase the Company’s
23 cost of capital, resulting in increased rates.

1 **Q. CAN YOU CITE ANY OTHER SPECIFIC REASONS WHY MR.**
2 **SEAMAN-HUYNH'S PROPOSED JURISDICTIONAL COST**
3 **ALLOCATION RECOMMENDATION IS NOT IN THE CUSTOMERS'**
4 **BEST INTEREST?**

5 A. Yes. A very important third reason, as I discussed briefly in response to Mr.
6 Wittliff, is that such a ruling may result in a negative reaction from North
7 Carolina regulators. It is reasonable to assume the North Carolina Utilities
8 Commission would likely take umbrage at such a ruling and see it as South
9 Carolina taking advantage of North Carolina's customers. To wit, most of the
10 Company's generating facilities are located in North Carolina and, yet, for
11 decades these facilities have served citizens in both states. To now disallow
12 legitimate environmental regulations and related costs, regulations that as I
13 have discussed are less stringent and less costly than regulations currently
14 applied in South Carolina, would likely be perceived as North Carolina
15 customers essentially subsidizing South Carolina customers.

16 In the end, I believe accepting this recommendation would likely result
17 in jurisdictional allocation controversies between South Carolina and North
18 Carolina; would result in increased rates over time; and could call into question
19 the equities of sharing assets and economies of scale across a multi-state
20 structure.

1 **IV. RESPONSE TO ORS WITNESS SMITH**

2 **Q. WHAT ISSUE ARE YOU ADDRESSING RELATED TO ORS**
3 **WITNESS SMITH'S SUPPLEMENTAL DIRECT TESTIMONY?**

4 A. I am responding to ORS witness Smith's updated Adjustment #36. This is an
5 updated adjustment operations and maintenance ("O&M") expenses for the
6 removal of (\$575,000) of litigation expenses purportedly attributable to legal
7 actions related to coal ash.

8 **Q. WHAT IS HER BASIS FOR THIS ADJUSTMENT?**

9 A. ORS witness Smith references ORS witness Wittliff's direct testimony and his
10 claim that "the Company violated state and federal laws resulting in damages
11 to the environment." (ORS witness Smith Supplemental Direct Test. 2:15-16).
12 Relying on Mr. Wittliff's testimony, ORS witness Smith concludes that:

13 "Customers should not bear the burden of legal costs related to the
14 Company's failure to operate its coal ash basin in accordance with state
15 and federal rules and regulations. Inclusion of the legal costs as an
16 allowable expense forces ratepayers to pay for Duke Energy Carolinas,
17 LLC's ("DEC" or "Company") failure to comply with the law.
18 Furthermore, the legal expenses are not related to providing adequate
19 electrical service and the customers derived no benefit from the
20 expenditures. These legal costs should be the shareholders
21 responsibility which in turn incentivizes the regulated utilities to operate
22 in compliance with federal, state and local laws."

23 (ORS witness Smith Supplemental Direct Test. 2:17-3:2).

1 **Q. CAN YOU PLEASE DESCRIBE EXACTLY WHAT LEGAL FEES ARE**
2 **ASSOCIATED WITH THIS PROPOSED \$575,000 DISALLOWANCE?**

3 A. The proposed disallowance appears to derive from litigation expenditures that
4 are listed in DE Carolinas' Confidential response to ORS Audit request number
5 55. The expenditures listed in that response relate to two matters involving the
6 Company: 1) the ongoing insurance recovery litigation and 2) defense of state
7 enforcement actions.

8 **Q. DO YOU AGREE THAT THESE LEGAL FEES SHOULD BE**
9 **EXCLUDED FROM RECOVERY?**

10 A. No. These legal fees should be recoverable from ratepayers.

11 **Q. WHY DO YOU BELIEVE THAT THESE LEGAL FEES SHOULD BE**
12 **RECOVERED FROM RATEPAYERS?**

13 A. There are two basic reasons for this conclusion. First, as a general matter, legal
14 fees should be recoverable because they represent a legitimate, reasonable, and
15 prudent business expenditure and, absent a finding that a specific legal expense
16 was imprudent or unreasonable, these expenses should be recoverable. The
17 Company must be afforded the opportunity to defend itself from lawsuits
18 especially from non-government related parties that is the origination of much
19 of the Company's legal expenses, including those in this case. Indeed, the
20 Company might even be considered a "target" so to speak for lawsuits and must
21 be allowed to vigorously defend itself.

22 Second, Mr. Wittliff's testimony does not support ORS witness Smith's
23 rationale for the recommended disallowance. I believe that a cost disallowance

1 must be based on the specific facts and circumstances that support such a
2 proposed cost disallowance. With respect to this criterion, ORS witness Smith
3 claims “[c]ustomers should not bear the burden of legal costs related to the
4 Company’s failure to operate its coal ash basin in accordance with state and
5 federal rules and regulations. (page 2, lines 17-19).” To support this claim and
6 related proposed cost disallowance, she references Mr. Wittliff’s direct
7 testimony and what he claims are environmental violations. The ongoing
8 insurance litigation was initiated by the Company for the benefit of its
9 customers to enforce insurance policies and obtain indemnity from insurers for
10 costs incurred associated with coal ash remediation. The insurance case is
11 focused on legal liability on account of property damage caused by an
12 occurrence, not environmental violations. If the Company prevails in this
13 litigation, the costs it recoups from its insurers will be passed along to benefit
14 its customers.

15 **Q. DOES MR. WITTLIFF IDENTIFY OR DISCUSS THE LITIGATED**
16 **MATTERS FOR WHICH ORS WITNESS SMITH IS**
17 **RECOMMENDING DISALLOWANCES?**

18 A. Only partially. There are three primary places in Mr. Wittliff’s direct testimony
19 where he discusses litigation relating the Company’s alleged environmental
20 violation (page 15, lines 21-23, page 16, lines 1-8, and page 17, lines 2-5). In
21 these three sections of Mr. Wittliff’s direct testimony, he cites his Exhibits 5.1,
22 5.2.1, 5.3.1, 5.3.2, 5.3.4 as legal actions that he believes indicate the Company
23 committed violations of environmental regulations. Only two of those exhibits,

1 Exhibits 5.3.1 and 5.3.2, relate to the state enforcement actions for which ORS
2 is recommending its disallowance.

3 Mr. Wittliff's Exhibits 5.3.1 and 5.3.2 are summary judgment orders
4 from state enforcement actions that were filed against the Company in 2013.
5 These state enforcement actions preceded the passage of both the federal CCR
6 Rule and the CAMA. It is my opinion that the Company has a legitimate right
7 and an obligation to defend itself from allegations of wrongdoing when the
8 Company believes it is in compliance with the then current coal ash regulations.
9 Moreover, the Company should defend itself and ratepayers in a legal
10 proceeding when the potential result could be the requirement that the Company
11 undertake coal ash remediation procedures that are beyond the current
12 regulatory requirements, and, which in the end, could prove far more costly to
13 customers than what would be required by either CAMA or the CCR.
14 Importantly, there has been no finding by the Court in these actions that the
15 Company violated any environmental statute or rule. Therefore, it is my
16 opinion that these legal fees are a legitimate and recoverable expense.

17 **V. RESPONSE TO ORS WITNESS PAYNE**

18 **Q. WHAT IS MR. PAYNE'S RECOMMENDATION WITH RESPECT TO**
19 **RECOVERY OF DEFERRED COSTS?**

20 A. Generally speaking, Mr. Payne recommends that any cost deferrals, except
21 those related to deferred income tax, be categorized as either an operating-
22 related or capital-related cost. He has further recommended that what he has
23 identified as depreciation expense not be included in rate base and be recovered
24 over time with no return on the deferred costs during the time period when these

1 costs are being recovered (amortization period). He has also recommended no
2 return on the deferred balances during the deferral period. Finally, for several
3 of his deferred expense costs, he has proposed amortization periods much
4 longer than what the Company is proposing.

5 **Q. WHAT IS THE ULTIMATE MONETARY IMPACT OF HIS**
6 **RECOMMENDATION?**

7 A. His recommendation does not allow the Company the opportunity to recover its
8 true costs for two reasons. First, by not allowing the recovery of a return on
9 uncollected deferred costs during the deferral period, the Company does not
10 have the opportunity to recover all of its costs associated with these deferred
11 accounts. Second, increasing the amortization period and not allowing a return
12 over the time period the costs are being recovered, prevents the Company from
13 recovering its costs associated with the cost of money.

14 **Q. IS HIS RECOMMENDATION CONSISTENT WITH YOUR**
15 **UNDERSTANDING OF THE USUAL METHODOLOGY EMPLOYED**
16 **AS IT RELATES TO THE RECOVERY OF DEFERRED COSTS?**

17 A. No. In my experience, his recommendation to disallow the recovery of a return
18 on a large portion of the Company's deferred costs is inconsistent with the
19 normal cost recovery allowed by regulatory bodies. Specifically, it violates the
20 basic regulatory compact, which can be stated as follows: "*A rate - regulated*
21 *entity incurs costs in order to provide reliable service to customers within its*
22 *approved service territory in a not unduly discriminatory manner **with the***
23 *expectation that it will have the right to recover those prudently incurred*

1 *costs, plus earn a fair rate of return on the capital that has been invested in*
2 *the business to support reliable utility service.”* (emphasis added) ⁴

3 **Q. HOW DOES MR. PAYNE’S RECOMMENDATION VIOLATE THE**
4 **BASIC REGULATORY COMPACT?**

5 A. It does not allow the Company the opportunity to recover its costs.

6 **Q. MR. PAYNE INDICATES IN SEVERAL PLACES IN HIS TESTIMONY**
7 **THAT ORS’S RECOMMENDATION “STILL ALLOWS THE**
8 **COMPANY TO RECOVER ITS ACTUAL DEFERRED COSTS” (page**
9 **6, lines 15-17, page 8, lines 6-8, page 11, lines 15-17). IS HE CORRECT?**

10 A. He is not correct when he does not allow the Company to recover in rates a
11 return on portions of the deferred accounts. A basic understanding of
12 accounting, finance, and economics tells us that there is a cost of money. In our
13 daily life, this is the interest rate on our credit cards or the interest rate we pay
14 on our home loans. In the context of utility regulation, we have cost of capital
15 witnesses that explain the costs of a utility’s capital. In addition, regulation
16 accounting has various accounts like rate base and working capital accounts for
17 which a cost of capital, represented by a return, is computed. So, too, the dollars
18 the Company has spent and placed in a deferred account, have a cost – these
19 dollars were not borrowed from investors for free and the Company is paying
20 those costs. Therefore, if a return on these deferred expenses is not allowed,

⁴ “Accounting for the Effects of Rate Regulation,” Edison Electric Institute, July 2011, page 5. *See also S. Bell Tel. & Tel. Co. v. Pub. Serv. Comm’n*, 270 S.C. 590, 595, 244 S.E.2d 278, 280-81 (1978) (“the governing principle for determining rates to be charged by a public utility is the right of the public on one hand to be served at a reasonable charge, and the right of the utility on the other to a fair return on the value of its property used in the service”) (citing *Bluefield Water Works & Improvement Co. v. Pub. Serv. Comm’n of West Virginia*, 262 U.S. 679 (1923)).

1 then it means the Company has not been allowed the opportunity to recover its
2 legitimate and prudent costs.

3 **Q. CAN YOU PROVIDE ANOTHER REASON WHY NOT ALLOWING A**
4 **RETURN PREVENTS THE COMPANY FROM RECOVERING ITS**
5 **TRUE COSTS?**

6 A. Yes. The most basic reason is it completely ignores the effect of inflation over
7 time; and, this impact is aggravated by Mr. Payne's other recommendation to
8 stretch out the Company's proposed cost recovery amortization periods, often
9 by decades. Thus, Mr. Payne's recommendations not only ignore the fact that
10 dollars the Company invests cost money, but he even ignores the impact of
11 inflation on the recovery of those costs. In the most basic economic terms, if
12 one ignores the impact of inflation and spreads over many future years the
13 recovery of dollars spent today, this means the Company can never recover its
14 true costs and never be made whole.

15 **Q. DO YOU HAVE ANY OTHER COMMENTS REGARDING MR.**
16 **PAYNE'S TESTIMONY?**

17 A. Yes. In several places he comments that the ORS recommendation "still allows
18 the Company to recover its actual deferred costs through amortization of the
19 proposed deferral balance which is a sufficient level of cost recovery." (page 6,
20 lines 15-17, page 8, lines 6-8, page 11, lines 15-17). I am at a loss to understand
21 what he means by the term "a sufficient level of cost recovery." I am also
22 unfamiliar with this term being the standard of cost recovery applied in a
23 regulatory forum because it seems to require a subjective opinion. In my

1 experience, the standard of cost recovery in regulation is the recovery of all
2 prudent and reasonable costs plus a reasonable return on those costs recovered
3 over time.

4 Even accepting Mr. Payne's concept that a sufficient level of cost
5 recovery is an appropriate regulatory standard, he provides no indication as to
6 how to measure "sufficient." Unless it is totally subjective, I am left to ponder
7 what financial or other metrics were used by ORS in its determination of
8 sufficiency? I believe that adopting sufficiency as a regulatory guideline, along
9 with the adoption of Mr. Payne's recommendations regarding no return on
10 much of the Company's deferred costs, would elicit a negative response from
11 the investment community. This would result in an increase in the Company's
12 cost to borrow money or attract equity investors, resulting in higher future rates
13 for all of its customers.

14 **VI. RESPONSE TO SOUTH CAROLINA ENERGY USERS**
15 **COMMITTEE WITNESS O'DONNELL**

16 **Q. WHAT ISSUES ARE YOU RESPONDING TO WITH RESPECT TO**
17 **MR. O'DONNELL?**

18 A. I am responding to the four basic issues that he raises regarding coal ash
19 compliance costs. First, I dispute his policy conclusion that the Company
20 should not be allowed to recover the costs associated with the W.S. Lee or Dan
21 River remediations. Second, I dispute his conclusion that the Company should
22 have been recovering coal ash closure costs in a cost of removal fund years ago
23 and his conclusion that failure to do so should result in a \$46.7 million cost
24 disallowance (page 44, lines 11-17). Third, I dispute his conclusion that the

1 Company's coal ash remediation costs "are MUCH greater than the coal ash
2 AROs from other utilities...[and this] implies that the North Carolina CAMA
3 legislation is much more stringent than the Federal CCR Rule requirements."
4 (page 47, lines 4-7) Finally, I dispute his overall recommendation that 75% of
5 the of the Company's coal ash remediation costs requested in this case be
6 disallowed.

7 **A. Disallowance of Lee and Dan River CCR Site Closure Cost**

8 **Q. DO YOU AGREE WITH MR. O'DONNELL THAT COAL ASH BASINS**
9 **ASSOCIATED WITH THE W.S. LEE FACILITY SHOULD BE**
10 **DISALLOWED FOR RECOVERY (page 41, line 23-24)?**

11 A. No. As I stated earlier, the inactive CCR unit closures at the W.S. Lee facility
12 were the result of a Consent Agreement signed on September 23, 2014, between
13 the Company and the SCDHEC and later on April 23, 2015, a related Settlement
14 Agreement with several environmental groups. I believe the regulatory
15 authorities and policy makers at SCDHEC are far more qualified to determine
16 the appropriate coal ash remediation policy for South Carolina than Mr.
17 O'Donnell. Consequently, the costs associated with these decisions should be
18 recoverable.

19 **Q. DO YOU AGREE WITH MR. O'DONNELL THAT CCR SITE**
20 **CLOSURE COSTS AT THE DAN RIVER FACILITY SHOULD BE**
21 **DISALLOWED FOR RECOVERY (page 42, line 23-26)?**

22 A. No. Mr. O'Donnell has not claimed that these Dan River costs are imprudent
23 or unreasonable, which is the general requirement to disallow a specific cost.

1 His whole argument is that the Dan River accident created CAMA and thus any
2 related costs are not recoverable. This, however, is not an accepted or
3 permissible basis upon which to deny costs and was properly rejected by the
4 North Carolina Utilities Commission when he made the same argument before
5 them.

6 **B. Timing of the Company's Request for Recovery of Coal Ash Disposal Costs**

7 **Q. MR. O'DONNELL CONCLUDES THAT THE COMPANY SHOULD**
8 **HAVE BEEN COLLECTING COAL ASH DISPOSAL COSTS SOONER.**
9 **DO YOU AGREE?**

10 A. I disagree. In fact, the North Carolina Utilities Commission addressed this very
11 issue and completely rejected the idea that some historical hypothetical start
12 date could be chosen, absent any regulations, at which time the Company
13 should have begun collecting ratepayer dollars in reserve for some future
14 unknown environmental costs. Such a regulatory policy fails to meet the most
15 basic regulatory requirement that rates are based on "known and measurable"
16 dollars. *See Hamm v. S.C. Pub. Serv. Comm'n*, 309 S.C. 282, 291, 422 S.E.2d
17 110, 115 (1992) ("adjustments for known and measurable changes in
18 expenses...must be known and measurable within a degree of reasonable
19 certainty"). In denying this proposed hypothetical collection of ratepayer
20 dollars that should have occurred at some time in the past for some hypothetical
21 future environmental expense that was going to possibly occur at some
22 unknowable future date, the North Carolina Utilities Commission stated:

1 *“Efforts to identify what DEC should have done prior to EPA CCR and*
 2 *CAMA, when it should have done so and what the costs should have been*
 3 *even with the benefit of 20/20 hindsight pose insurmountable obstacles.*
 4 *Without statutory or regulatory standards and guidelines to follow, no*
 5 *one can say what the prudent course would have been even if one acts*
 6 *on the assumption that DEC was imprudent to await promulgation of the*
 7 *definitive environmental regulatory requirements....” Order in Docket*
 8 *No. E-7, Sub 1146, June 22, 2018, page 263.*

9 I agree with the North Carolina Utilities Commission’s rejection of this type of
 10 recommendation that is now being proposed by Mr. O’Donnell’s in South
 11 Carolina.

12 **C. DE Carolinas’ Coal Ash Costs Relative to Other Utilities**

13 **Q. MR. O’DONNELL INDICATES THAT THE COMPANY’S CCR SITE**
 14 **CLOSURE COSTS ARE MUCH GREATER THAN THE CLOSURE**
 15 **COSTS OF OTHER COMPANIES AND THIS IS DUE TO CAMA (page**
 16 **47, lines 4-7). DO YOU AGREE?**

17 **A.** I do not agree, and I believe that a fatal flaw with his argument is one of timing.
 18 To explain, he uses data from SNL Financial and 2017 financial statements to
 19 extract his data (page 46, lines 1-5). While this may seem to be current, in the
 20 context of coal ash, this is not true since there are ongoing regulatory and legal
 21 proceedings and various Company coal ash updates. For example, in the past
 22 thirty days Virginia adopted a very costly coal ash bill that will significantly
 23 impact Dominion Energy; and, Georgia Power, in October of 2018, updated the

1 sites it is excavating by adding an additional 29 million tons of ash to be
2 excavated. These laws in other states are evolving since the passage of the
3 Federal CCR Rule, as evidenced by the legislation recently adopted in Virginia,
4 the recent introduction of a bill in Georgia, and the numerous ongoing legal
5 proceedings in other jurisdictions. It just so happens that South Carolina and
6 North Carolina began the process earlier, and, in fact, South Carolina essentially
7 leads the Southeast as it began excavation of its sites in 2012.

8 To illustrate the current state of cost estimates, refer to the following
9 table that compares Mr. O'Donnell's cost estimates to some updated cost
10 estimates. Table JAW-1 shows that for three neighboring utilities, Georgia
11 Power, Alabama Power, and Dominion Energy (in Virginia), Mr. O'Donnell's
12 ARO coal ash compliance dollars are significantly less than what these utilities
13 have recently reported. Mr. O'Donnell doesn't even report TVA, whose
14 compliance costs are still in dispute but could range far in excess of the current
15 \$2 billion estimate if the least costly method of closure is not used. Therefore,
16 because neighboring state utilities are just now beginning to get new rules, or
17 settle cases, the coal ash costs Mr. O'Donnell is reporting for these neighboring
18 states are lower than the more current cost estimates. Consequently, Mr.
19 O'Donnell's conclusion that the Company's "coal ash costs are MUCH greater
20 than the coal ash AROs from other utilities" and that this increased cost is
21 caused by CAMA (page 47, lines 4-7) is contradicted when one considers more
22 recent coal ash cost data.

TABLE JAW-1: COMPARISON OF O'DONNELL REPORTED COAL ASH COMPLIANCE COSTS				
COMPANY	O'Donnell Reported Cost, Direct Testimony Table 8, page 46	Estimated Cost to Comply With CCR and State Regulations		Source
		Minimum	Maximum	
Dominion Energy Virginia	\$624M		\$5.6B to 8.2 B+ (note, with the passage of the recent legislation the costs is expected to approach the estimates for excavation, which the legislation requires)	AECOM Report in Response to SB 1398, Tables ES-1, ES- 2, Nov. 2017 and https://www.richmond.com/news/virginia/coal-ash-excavation-could-cost-dominion-ratepayers-an-extra-per/article_7e0269a2-c791-58d8-949c-5710083b1875.html December 17, 2018
GA Power	\$1.424B	\$1.5B	\$2.0B (note, this does not include the recent 29 million tons to be excavated at two additional sites – to put this additional 29 million ton potential cost in perspective, the recent VA legislation calls for Dominion to excavate 28 million tons at a cost estimate of \$5.6 B to over \$ 8.2 B)	http://www.ajc.com/business/georgia-power-close-ash-lagoons-sooner-could-cost-billion/Un9uNUQFtsZZBJXVgKGNak/ , June 13, 2016
Al Power	\$324M	\$1.14B	No estimate provided	Docket No. 18117, Al Power Compliance Plan, Dec. 13, 2016
TVA	Not reported	\$3.5M	\$2.3B	http://www.powermag.com/tva-backs-in-place-coal-ash-impoundment-closure-method-over-remo

1 **Q. EVEN IF THE COMMISSION WERE TO ACCEPT MR.**
2 **O'DONNELL'S ASSERTION THAT THE COMPANY'S COAL ASH**
3 **COMPLIANCE COSTS ARE IMPROPERLY HIGHER THAN OTHER**
4 **UTILITIES IN THE NATION, IS HIS PROPOSED 75% COST**
5 **DISALLOWANCE A PROPER METHOD OF ADDRESSING THIS**
6 **FACT?**

7 **A.** No. The appropriate mechanism for adopting a cost disallowance is a finding
8 that a specific level of costs is imprudent, unreasonable, or not used and useful.
9 Mr. O'Donnell makes none of these arguments but simply advocates for a
10 blanket 75% cost reduction with no identification of costs that were imprudent,
11 unreasonable, or not used and useful.

12 **VII. RESPONSE TO SIERRA CLUB WITNESS HAUSMAN**

13 **Q. SIERRA CLUB WITNESS DR. EZRA HAUSMAN CONTENDS THAT**
14 **THE COMMISSION SHOULD REQUIRE THE COMPANY TO DO A**
15 **COMPREHENSIVE RETIREMENT ANALYSIS AND THAT THE**
16 **RECOVERY OF THE CCR COSTS BE CONDITIONED ON THE**
17 **FILING OF THIS ANALYSIS (page 24, l. 1-14). DO YOU AGREE?**

18 **A.** No. I disagree with his recommendation of conditional recovery for several
19 reasons. First, allowing a "conditional cost recovery approval" is inconsistent
20 with the facts of this proceeding. To wit, the Company is expending resources
21 to meet environmental compliance deadlines. These expenditures are not
22 optional, and they are time sensitive. Therefore, unless these costs have been
23 demonstrated to be imprudent, unreasonable, or not used and useful, which no

1 witness has contended or provided evidence to support, then the recovery of
2 these costs should be allowed at this time.

3 Second, a conditional approval is inconsistent with the cost recovery
4 standards under which this Commission has based its regulatory policies
5 (discussed earlier in this testimony). Those policies are that costs are
6 recoverable if they have been demonstrated to be prudent, reasonable, and used
7 and useful. No witness has contended or provided evidence to dispute these
8 costs meet this standard, thus the recovery of these costs should be allowed at
9 this time.

10 Third, because these expenditures are required at this time in order to
11 meet legal deadlines, as Mr. Kerin has explained in his direct testimony, then
12 the Company has the legal right to seek recovery of these costs in a timely
13 manner and has done so in this case. To accept Dr. Hausman's "conditional
14 recovery" would essentially cast a shadow of delay on potential future refunds
15 with respect to these now conditionally recovered expenses, which would likely
16 elicit a negative reaction from the investment community. The reason is
17 because of a risk that the Company's earnings would apparently be subject to
18 restatements as a result of customer refunds if, in the future, the Commission
19 did not approve of the comprehensive retirement analysis upon which Dr.
20 Hausman conditions his cost recovery approval.

21 Finally, I am at a loss to understand how this "conditional recovery"
22 idea would even work. I believe, at the very least, such a policy would be seen

1 as retroactive ratemaking which is not allowed in most regulatory jurisdictions,
2 including South Carolina.

3 **Q. DOES THIS CONCLUDE YOUR PRE-FILED REBUTTAL**
4 **TESTIMONY AT THIS TIME?**

5 A. Yes.
